

Heston's Heroes Golf Tournament

HESTON IS A 7 YEAR OLD BOY SUFFERING FROM SHWACHMAN DIAMOND SYNDROME.

Shwachman-Diamond syndrome (SDS) is a rare genetic condition that affects a child's bone marrow, pancreas and bones. Sometimes it involves other parts of the body.

Children with SDS can develop bone marrow failure. This means the soft center of bones does not make enough blood cells to stay healthy. If SDS affects your child's pancreas, they may not get enough nutrients from food. This affects their growth. Many children with SDS also have problems with how their bones develop. In addition, the condition may increase the risk of blood cancer.

Heston is currently on a feeding tube 24/7 and has started the process of Bone Marrow Failure. *We are in active search of a Bone Marrow Donor for him at this time.*

We are holding a:

BENEFIT Golf Tournament For Heston

Saturday November 18, 2017 | Tee Time: 12 Noon

Ocala Golf Club
3130 E Silver Springs Blvd.
